Issued By: _____ Date Issued: _____

CITY OF FOLEY

EROSION AND SEDIMENT CONTROL

The owner or contractor shall make regular inspections of all control measures throughout the construction process to ensure the overall effectiveness of the Erosion and Sediment Control Plan.

A stabilized construction access shall be required in order to ensure sediment is not tracked on the public streets from the construction site. If heavy sediment tracking occurs on public streets, it may be required to remove accumulated sediments from streets and ditches.

Soils must be stabilized by temporary or permanent erosion control fourteen (14) days after clearing or inactivity in construction.

Techniques shall be employed to prevent the blowing of dust or sediment from the site on adjacent properties.

The following inspections shall be performed at a minimum on multi-family, subdivision, commercial and industrial development:

1. Immediately after erosion and sediment controls are in place.
2. After clearing and grading has been completed.
3. After drainage has been installed.
4. After streets, curb and gutter have been completed.
5. Before construction completion.

All construction waste and debris, silt fences, hay bales, inlet protection, and other temporary BMPs shall be removed prior to final inspection except the temporary BMPs installed for the next phase of construction, such as home building.

Please contact Martha Smith @ 251-971-1001 to set up inspections.
